New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 20; SEQ ID NO 37153; 103pp; English.

control of the first transformers of the first transformers. (I) is useful as hybridisation probes, polymerase chain condition (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) or to treat disease states involving (II). (II) is considered in tissue, as molecular weight markers and as a food golypeptide in tissue, as molecular weight markers and as a food golypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful in medical imaging convolving aberrant protein expression or biological activity. The colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have application of mutations colypeptide colypeptide in types of data and products dependent on DNA and colypeptide in the printed specification, but was obtained in celectronic format directly from WIPO at colypeptide in the printed specification, but was obtained in the printed specification, but was obtained in celectronic format directly from WIPO at The invention relates to isolated polynucleotide (I) and polypeptide polymerase chain

                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated polypeptide comprising any of 33 90-1273 amino acid sequences (I) given in the specification or its mature form, a sequence that is at least 95 % identical to (I), or a sequence comprising one or more conservative substitutions in the amino acid sequence of (I). The polypeptide is useful for preparing a composition for treating or preventing e.g. cancer. This is the amino acid sequence of a novel human NOV protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alsobrook JP, Burgess CE, Catterton E, Chant JS, Chan Eddinger SR, Gerlach VL, Giot L, Gorman L, Guo X, Kel Mezes PS, Millet I, Ooi CE, Patturajan M, Rieger DK, Taupier RJ, Zerhusen BD, Zhong H, Zhong M;

The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methods are used for diagnosing presence or absence of a tumor in a human, especially breast, colon and pancreatic cancer. They are also used to inhibit cancer cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polymucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the

Polynucleotides encoding lung cancer or stimulating ng an tumor polypeptides,
immune response. useful for treating

Claim 2; Page 365-367; 374pp; English

tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present The present invention describes human lung tumour proteins. Human lung fusion

The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

Example 2; Page 330-332; 374pp;

immune

response.

                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABI/48959 to ABI/4930 and ABB74946 to ABB7507 represent sequences used in the exemplification of the present invention.

CC The present invention describes isolated human lung carcinoma
CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic
CC activity, and can be used in gene therapy and in vaccines. Compositions
CC comprising (I) or (II) can be used for stimulating an immune response in
CC (I) can be used for treating lung cancer in a patient. Oligonucleotides of
CC (I) can be used for detecting the presence of a cancer in a patient, by
CC obtaining a biological sample from the patient, contacting the biological
CC sample with the oligonucleotide, detecting in the sample, an amount of
CC polynucleotide that hybridises to the oligonucleotide and comparing the
CC amount of polynucleotide that hybridises to the oligonucleotide to a
CC the patient. (I) and (II) are useful in pharmaceutical compositions, e.g.
CC vaccines. (I) is useful as a marker to indicate the presence or absence
CC of a cancer such as lung cancer. ABQ92145 to ABQ9286 and ABP61866 to

The present invention describes isolated human lung carcinoma CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic CC comprising (I) or (II) can be used in gene therapy and in vaccines. Compositions CC comprising (I) or (II) can be used for stimulating an immune response in CC a patient and for treating lung cancer in a patient. Oligonucleotides of CC a patient and for treating lung cancer in a patient. Oligonucleotides of CC sample with the oligonucleotide, detecting the patient, by CC (I) can be used for detecting the patient, contacting the biological CC sample with the oligonucleotide, detecting in the sample, an amount of CC amount of polynucleotide that hybridises to the oligonucleotide to a CC concentrate of the cut-off value, and determining the presence of a cancer in CC the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. CC vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ92145 to ABQ92486 and ABP61866 to CC ABP61992 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wang T,
Mcneill
                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel lung carcinoma polynucleotide sequences and polypeptides encoded the polynucleotides, useful in pharmaceutical compositions such as vaccines and as markers to indicate the presence of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-DEC-2000; 2000US-00735705.

Novel lung carcinoma polynucleotide sequences and polypeptides e the polynucleotides, useful in pharmaceutical compositions such vaccines and as markers to indicate the presence of lung cancer.

Claim 9; Page 372-374; 381pp; English.

The present invention describes isolated human lung carcinoma polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions, e.g.

                                                                                                                                                                                                                                                                                                                The invention describes isolated polynucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polynucleotide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above; at least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to the above nucleotide sequences, or degenerate variants of the above nucleotide sequences. The composition and methods are useful in diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18-MAR-1998;
